Moving in a New Direction

The WCMA advances and promotes the interests of the North American wood products industry through interactive and innovative manufacturing solutions.

At this point, I have been with the Wood Component Manufacturers Association for just over a year, and what an exciting year it’s been! I have been fortunate to work with a very engaged Board of Directors who recognize and support the need for change, and I am eager to share with you the ways that WCMA has grown, and our plans for continued growth.

For those of you who don’t know, the WCMA represents manufacturers of dimension and wood component products who can supply any component you might need. Buyers can easily find WCMA members — one call to the WCMA office or a visit to the Source Guide on our website, WoodComponents.org — can connect you with a WCMA member company that can produce the exact product to your specifications.

WCMA members will partner with you in your business and help you prepare for improving business conditions. Our members enable you to adapt to changing markets and consumer preferences with their expertise in customizing the exact components you need for your wood products, from the simple to the fully-machined, tight-tolerance wood parts. And they’re available to you right next door — not around the world.

Located throughout the United States and Canada, WCMA member companies produce rough, semi and fully machined wood component products for the cabinet, furniture, building products, staircase, flooring, millwork, store fixture and related decorative wood product industries, in a variety of hardwoods, softwoods, and engineered wood materials. By outsourcing these components, wood product manufacturers are able to gain a competitive edge and combat the rising costs of doing business.

Last fall, the WCMA Board of Directors held a strategic planning session. During that time we recognized the need to modify the mission of the organization to better reflect the ways that we serve our current and future members. The new mission statement is “The Wood Component Manufacturers Association advances and promotes the interests of the North American wood product industry through interactive and innovative manufacturing solutions.” This statement clearly identifies our focus on advancing and promoting our industry, and promotes our organization as a “One-stop shopping source for all of your component needs.”

During the Strategic Planning session, the Board also recognized the need to focus on our members and Technology Partners, while identifying specific ways to serve them. The areas that we are focusing on in the upcoming year include: changes to the Fall Conference & Plant Tour event to include educational sessions and more opportunities for members to connect with Tech Partners, the addition of a Spring Meeting, as well as a fully redesigned website with exciting new features.

Other resources offered by the WCMA include trade promotion, information on rules and specifications for dimension and components, research studies and plant tours.

The WCMA Member & Tech Source Guide

On pages 13-18 is the WCMA Membership Guide.
Directory & Source Guide. It includes a description of products by member companies, wood species, and machining capabilities. This makes it easy for dimension and component buyers to identify the firms that produce the products they need and provides them with contact information.

In addition, a listing of WCMA Technology Partners is listed on pages 10-12. These companies are a great source for woodworking machinery, tooling, software and business solutions needs.

Fall Conference & Plant Tour Event
The WCMA annually holds a Fall Conference and Plant Tour event. For more information on the 2014 event, see page 8.

Trade Promotion
The WCMA recognizes the need for increased promotion and has increased its marketing efforts for WCMA members and the wood component industry as a whole. Exhibiting at trade shows throughout the world, participating in many specialized woodworking industry events and seminars, publishing the Wood Components Buyer’s Guide, advertising in major woodworking magazines, and maintaining a comprehensive website are some of the ways the WCMA is promoting its members and the wood component industry.

The WCMA also receives a number of sales leads through our website and trade shows, and these leads are then passed on to members.

WCMA Member Match™ Program
Sales inquiries from component buyers are received by the WCMA office on a daily basis. The WCMA’s Member Match™ Program is a system that provides prospective buyers with a list of all WCMA members who can produce the specific component products they need. The service is free of charge to component buyers and WCMA members, and can be accessed on our website in the Source Guide area.

WCMA Rulebook
The WCMA publishes the “Rules and Specifications for Dimension and Woodwork.” The Rulebook covers dimension & component grading rules, tolerances and claim procedures for domestic and export trade. It also serves as a guideline for buyers of dimension and component products and is a valuable communications link between component buyers and suppliers. The pocket-sized Rulebook is available for $5.00 per copy. Visit WoodComponents.org for additional information.

For more information about the WCMA’s programs and activities, or if you wish to become a member of the association, please contact the WCMA office at wcma@woodcomponents.org.

WoodComponents.org
Hello and welcome to the “NEW” Wood Components Manufacturers Association. I am excited to let you know what the WCMA is doing to better serve our members - and the wood components industry.

In the past year there have been many changes to the WCMA. The first big change was appointing Amy Snell as the Executive Director and the offices were relocated to the Minneapolis, MN area:

WCMA
P.O. Box 662
Lindstrom, MN 55045
651-332-6332, FAX 651-400-3502
wcma@woodcomponents.org
amy@woodcomponents.org.

With Amy’s direction, the WCMA board has transformed into a completely new and functioning group of your industry peers. There have been two face-to-face board meetings and several teleconferences to discuss the association’s need for change. Your board members have generously taken time away from their own businesses to better serve the needs of the members.

Many of the changes are procedural, and will enable the association to better perform in a more economical and efficient manner. The bylaws have been updated and modernized to reflect the changes in the methods of doing business and communications.

Amy has been working very hard at reestablishing the committee structure with the following committees formed: Finance Committee; Communications Committee; Education and Programs Committee; and Membership Committee. We are currently seeking members to serve on the Membership and Communications committees — please contact the office if you are interested. The other committees have been appointed a chair and several of your fellow members are actively engaged in building a more vibrant association.

There are other programs that will be re-established in a more relevant and beneficial manner.

Surveys: The three surveys that were done in the past (Market Study, Cost of Doing Business, and Wage & Benefits) have been combined into one more informative survey that is much more user-friendly. The survey will soon be available online and should take only minutes to complete. I want to stress, we cannot gather pertinent, valuable information without your participation. Please take the time to complete the survey and you will see the benefits with the information that is returned.

Fall Conference and Plant Tours: The plant tours will continue in the fall with the addition of educational sessions and more involvement by our very important “Tech Partners”.

Spring meeting: We are re-establishing the spring meeting starting in 2015. This is a great opportunity for members to network as well participate in some excellent educational programs. In 2015, this meeting will be held in conjunction with the Woodworking Industry Conference (WIC) and we are currently planning WCMA member’s only activities. More information will be disseminated as it becomes available.

Delinquent account reporting: The WCMA recognizes the value in sharing delinquent accounts between members. Each quarter, the office sends out a form asking you to report your delinquent accounts. Participation has been very minimal, so reporting has been difficult. I encourage you to send the form to the person that can complete it as best as possible and return it to the office so that we can continue this valuable service.

Sales leads: The office will continue to collect leads, and we are hoping to expand this service to the members in the upcoming year.

Labor and Relations: The WCMA has partnered with Wimberly and Lawson Law firm to provide the monthly Labor & Relations Bulletin. Please be sure to forward this valuable information to the correct people in your facility.

Amy has also undertaken many new programs and systems to better serve the membership needs. There will soon be a Member Profile questionnaire sent to all of the members to complete. This will enable your association to make sure all contact information is correct and that we are able to get the WCMA information to the correct person within all of our member organizations.

With this information it will be possible to generate a more valuable online presence for the WCMA with links to our membership. A new website will provide much more information and ability to connect with other members and tech partners regarding individual issues and opportunities.

There will also be a short, and to the point, newsletter developed on either a monthly or semi monthly basis with pertinent information relating to our industry.

I would encourage all members to become more involved in the association either as board members or committee members. If you have any interest in becoming more active please contact amy@woodcomponents.org.

Thank you for the opportunity to serve in this industry.
The Wood Component Manufacturers Association works with industry groups for the betterment of the North American woodworking industry, while keeping members informed of relevant issues that impact their businesses. Among the key issues are:

**Proposed Hardwood Checkoff Program:**
Earlier this year, the Hardwood Checkoff Blue Ribbon Committee submitted revisions to the proposed program that would limit the scope of eligible products while including export sales and yellow poplar. Key is the removal of all industrial lumber and lumber products from eligibility.

Checkoff programs are collective marketing efforts funded by the product producers and run by an industry-governed board; coordinated through the USDA. Under the Hardwood Checkoff proposal, funding for the program would come from sawmills producers and kiln-operating facilities with annual sales in excess of $2 million. These companies would be required to pay $1 per $1,000 on sales on the raw product. Value-added – though still considered unfinished – products, such as unfinished strip flooring, mouldings, dimensioned components, S4S, etc., will also be subject to a checkoff fee, but at a reduced rate of $0.75 per $1,000 in sales. ([HardwoodCheckoff.com](http://HardwoodCheckoff.com))

**Lacey Act:** The Lacey Act makes it illegal to trade plants and plant products, including wood, harvested or traded in violation of the laws of a foreign country. It also requires importers to file a declaration with the name of the country of harvest and the genus and species of plants contained in their products. As a member of the Hardwood Federation, the WCMA works in support of the Lacey Act. ([FWS.gov](http://FWS.gov))

**Biobased Markets Program:** As it currently stands, many forest products are ineligible to reap the benefits of the USDA’s BioPreferred program, while products with as little as 25% biobased content can be included. The Hardwood Federation is working with Congress to make forest products eligible for the program and has given its support to the Forest Products Fairness Act of 2013 (S. 463 and HR 979), which would create a level playing field. ([HardwoodFederation.net](http://HardwoodFederation.net))

The WCMA keeps watch on key issues impacting wood component manufacturers.

See us at IWF, August 20-23, 2014
The WCMA conducts a Fall Conference & Plant Tour Event each year. The Fall Conference presents an excellent opportunity for WCMA members to network and have an open discussion on common concerns. Members also tour the production facilities of several dimension, component, cabinet, furniture, millwork and related woodworking companies.

These plant tours provide WCMA members with a unique opportunity to observe innovative woodworking manufacturing operations and discover new manufacturing techniques, exchange ideas and learn about alternative manufacturing methods. Everyone comes away with at least one good idea that can be implemented in their own plants.

2014 Fall Event Details

The 2014 WCMA Fall Conference & Plant Tour Event will be held on September 14-16 at the Best Western/Country Cupboard in Lewisburg, PA. Tours of several outstanding woodworking operations are planned, including: Tilo Industries in Lewisburg, Heister House in Pleasant Mills, two Conestoga plants in Beavertown and Beaver Springs, Wood Mode in Kreamer, and Bingaman & Sons, also in Kreamer.

We are also very excited to include three hours of educational sessions this year, with a variety of speakers from Penn State. Topics covered include “Green is the New Lean,” “Bio Renewable Opportunities and Changes,” “Sticking Points – The Basics of Wood Adhesion,” and “Dirty – Why Surfaces are Never Clean and How This Impacts Coating/Finishing Operations.”

The WCMA Educations and Programs Committee has been working hard to ensure that there is something for everyone, so be sure to make plans now to have plant managers and other key personnel in attendance.

Also in 2014, the WCMA is excited to partner with the Wood Machinery Manufacturers of America (WMMA). All WMMA members are encouraged to attend the WCMA Fall Conference and Plant Tour event, and then take advantage of free transportation to the WMMA Public Policy Fly-in and Committee meetings in Washington, DC. The Fly-in event is highlighted by a day on Capitol Hill for WMMA members and other industry representatives to meet with their elected U.S. representatives and senators to discuss issues of importance to the health and vitality of the U.S. woodworking industry.

In addition, we will be holding the Wood Technology Expo, which connects leading providers of woodworking machinery, equipment, supplies, software and business solutions with WCMA members. WCMA members and Technology Partners will have opportunities to connect with others in the industry and can share solutions to manufacturing challenges. There will be a sit down dinner with round table discussions, as well as two receptions where exhibitors will display tabletop exhibits with information on their companies.

A listing of WCMA Technology Partners is on pages 10-12 of this Buyer’s Guide. These companies are a great source for all your woodworking machinery, tooling, software, and business solutions.

Program details and registration for the WCMA Fall Conference & Plant Tour event are now available. For additional information about participating in this event, contact the WCMA office at wcma@woodcomponents.org or visit WoodComponents.org today.

friulmacusa.com

GREAT LAKES CUSTOM TOOL MFG.  
Products: Great Lakes Custom Tool Mfg., Inc. (GLCT), a family owned company headed by Russ Martin and son, Ray Martin, and a team of 75 employees, has been providing custom tooling to the wood and composite industries since 1979. They specialize in providing quality tooling specific to the application such as: PCD, Great-Loc® Dedicated Insert System, Great-Loc® SG Universal Tool System, Helicarb® (brazed or mechanically held twisted carbide bent to a known helix), brazed, solid carbide, high speed steel along with custom saw blades. They manufacture custom tooling plus modify and recondition tooling. 3.5 Scout computer controlled rip saw is available with the Rip Navigator 524-DC/SR “Select-A-Rip” has up to four fully independent shifting saw blades for improved production flexibility and glue joint accuracy. It is available with the Rip Navigator 3.5 Scout computer controlled rip optimizing system, featuring an integrated manual control interface for max yield, improved feeding accuracy and detailed reporting options. See us at IWF Booth #5567 (612) 529-7791
Mereen-Johnson.com

HASKO, INC.  
Products: Hasko, Inc. is an American manufacturer specializing in “Heavy- Built” medium-to-high production rough mill and flooring plant machinery. Products include: optimizing gang rip saws & systems; S4S & S2S sidematching and planing centers; end matchers for solid & laminated material; lineal feed tables; sorting, grading and nesting systems; Hasko Scanning Systems for rip and chop defecting and optimization; Crayonmark & optimizing cutoff saws; custom machine design; custom repair work; and field service and troubleshooting. 423-648-5200

RUF briquetting systems allow manufacturers to recycle their residual wood waste, including wood chips, dust, shavings and sawdust, in an environmentally friendly way. RUF says its energy-efficient briquetting systems are customizable and work at calculated pressures of up to 24,000 psi to create high quality wood briquettes. The systems directly integrate into existing production facilities, enabling manufacturers and processors to recycle their residual wood waste in an environmentally friendly way.

888-440-7170 • WEIMAAMERICA.COM • INFO@WEIMAAMERICA.COM
The benefits of working with WCMA member partners are clear. Manufacturers that outsource components are more profitable than those that don’t. Period. All of the independent studies since 1970 prove it. It’s just good business to outsource.

Finding a supplier that can consistently produce quality components and be responsive to your needs is easier than ever before. Just call us or visit our online Source Guide and get a list of WCMA member companies that will meet your exact requirements for dimension and component products made from hardwoods, softwoods and engineered wood materials. It’s that easy.

ATTENTION COMPONENT MANUFACTURERS: Join the WCMA and prosper! Take advantage of WCMA’s many promotional, educational and research activities to grow your business. We can help wood component manufacturers find new markets and customers for the products you make.
